Product & Program Manager with a hands-on builder's mindset and a passion for AI-driven, user-focused solutions. Skilled in leading end-to-end product strategy, leveraging strong SQL and data analysis skills to drive agile delivery, and translating complex technical requirements into user-centric experiences

EDUCATION

The George Washington University, Washington, DC | GPA: 3.73/4.00

08/2023 – 05/2025

Master of Science in Engineering Management (STEM) | Technology and Management Track

Certifications

Certified Scrum Product Owner (CSPO®) ([Link](#)), Google Project Management ([Link](#)), Product Marketing Bootcamp ([Link](#)), Google Data Analytics ([Link](#)), Six Sigma Yellow Belt Specialization ([Link](#)), Supply Chain Management Specialization ([Link](#)), Oracle AI Vector Certified Professional ([Link](#)), Oracle Fusion Cloud Applications ([Link](#))

PROFESSIONAL EXPERIENCE

Product Manager

08/2020 – 07/2023

Savax Credit Solutions

Gurugram

- Led end-to-end product strategy and KPI-driven execution for a B2B SaaS platform, reducing non-performing assets (NPAs) by 20% annually through optimization of resource allocation and feature ranking models
- Collaborated with engineering, data science, and UX to launch financial scoring, allocation, and tiered pricing features, directly impacting user segmentation and advertiser ROI
- Produced high-span presentations and 1-pagers for leadership, providing data-backed recommendations on auction design, marketplace health tradeoffs, and platform monetization
- Partnered with cross-functional business, sales, and GTM teams to launch optimization initiatives that grew enterprise upsells by 25% and accelerated new client onboarding by 30%
- Integrated user feedback loops and agile delivery (Jira, Confluence) to fine-tune ranking algorithms and support quarterly improvements in adoption and net promoter score (+40% UI/UX)
- Tracked key performance indicators using SQL, Google Data Studio and Excel dashboards to manage initiatives within complex ecosystem and deliver actionable business insights

Business Analyst

05/2016 – 07/2020

PKA Constructions

Delhi

- Conducted in-depth user research with over 50+ site workers and managers to gather requirements for a real-time workforce tracking SaaS platform
- Collaborated with cross-functional teams to design an iterative delivery plan, which resulted in a 90% adoption rate and a 50% reduction in idle labor costs for client
- Designed and managed cross-functional sprints (backlog grooming, retros, planning), communicating requirements to engineering and achieving 100% sprint goals

SKILLS

Product Management: Road mapping, Product Discovery, MVP, Agile Sprints, Sprint Planning, Retros, Stakeholder Comms

Tools: Jira, Confluence, Figma, Firebase, Advanced Excel (PivotTables, VLOOKUP, Power Query) SQL, Google Data Studio

Analytics & Research: A/B Testing, Behavioral Analytics, Event Tracking, KPI Modeling, User Research, UAT, Analytical Skills

Platforms & APIs: REST APIs, SaaS Models, Mobile App Integration, Internal Tool, AI

PROJECTS

Astro Sage AI ([Link](#)) / **Finwise** ([Link](#))

Built an end-to-end AI-powered web platform that provides personalized insights by integrating the Gemini API. The platform featured multiple modules: one for financial health that analyzed user data (income, expenses, debts) to offer actionable advice and goal tracking, and another for Vedic astrology that generated predictions from planetary data. I designed the full-stack solution with React + Tailwind for the frontend and utilized Firebase for secure user management and real-time data storage

Dell Sustainability Project (Capstone) ([Paper Publication in progress](#))

Designed and implemented lifecycle assessment (LCA) and optimization models for Dell's OptiPlex Small Form Factor (SFF) desktop, focusing on integrating sustainable materials to reduce environmental impact. Generated pitch decks, emission summaries, and visuals used for internal reporting and external presentations

Marketing Analysis ([Link](#))

Designed and implemented comprehensive user preference surveys using R, Shiny, and SurveyDown, gathering insights from 1,000+ respondents to inform AI-powered smartphone optimization features. Enhanced data accuracy through advanced data cleaning, modeling, and sensitivity analysis, leading to precise feature prioritization
